1. PRD - What is LUCE?

PRD means Product Requirements Document. It explains what we are building and why.

Simple idea

LUCE turns ONE real product into a full marketing campaign. Flow: Product -> Research -> Strategy -> Complete campaign.

Who is it for?

- Shopify / online shop brands
- DTC (direct-to-customer) brands
- Beauty, skincare, perfume, accessories, lifestyle products

What the user does

- 1. Create campaign
- 2. Add product URL or product photos
- 3. Confirm product details
- 4. LUCE researches market and competitors
- 5. LUCE builds strategy
- 6. LUCE generates visuals, videos, social posts, ads
- 7. User reviews, edits, downloads ZIP
- 8. User posts manually (no auto-publish in MVP)

What you get

- Product photos and lifestyle images
- UGC / Reels style videos
- Captions, hooks, CTAs, hashtags
- Ad creatives and ad copy
- Research + campaign strategy
- Saved campaigns + ZIP download

Big problems we solve

- Brands use too many separate AI tools
- AI often changes the real product look (distortion)
- Assets look random and not like one campaign

MVP vs later

MVP = create, research, strategy, generate, save, download. Later = auto post to Instagram/TikTok, scheduling, analytics.

One line: LUCE turns one real product into a research-backed marketing campaign.
